

PROJECT SCOPE FOR TODAY

Backend Development | 28 September 2026

Objective

Improve backend infrastructure, complete missing API functionality, and strengthen alert processing and dashboard data handling.

No.	Area	Today's Scope
1	Storage	Review the existing SQLite setup and plan the migration to PostgreSQL + TimescaleDB for time-series data.
2	Alerts API	Implement the missing PATCH <code>/rules/{rule_id}</code> endpoint using the existing <code>UpdateRuleRequest</code> model.
3	Notification Management	Design API endpoints for managing notification channels such as Webhooks, Email, and PagerDuty.
4	Alert Evaluator	Review the alert evaluation state machine and plan scheduler integration using <code>APScheduler</code> or <code>Celery</code> .
5	Source Maps API	Review the upload and storage pipeline and prepare for future S3/Blob storage integration.
6	Stats Endpoint	Review the <code>/stats</code> endpoint and implement or plan time-bucketed aggregation queries for dashboard charts.

Expected Deliverables

- Functional alert rule update API.
- Notification channel management API design.
- Alert evaluator scheduling plan.
- Storage migration and source map storage improvement plan.
- Dashboard statistics aggregation improvements.

Today's Priority

Complete the alert rule update endpoint and review the alert evaluator and statistics endpoint, while preparing the remaining infrastructure changes.
